

Event Internet Access Services

| Service | Description (see following pages for details) | Price |
|--------------------------|---|--------------|
| Wired Services | Includes cable to desired location including tape-down | |
| Ethernet | Service is provided on an Ethernet cable in the Exhibitor's booth or podium, etc. Addressing is Dynamic in private IP range (not public IP address). | \$300 |
| Ethernet with Static IP | Service is provided on an Ethernet cable in the Exhibitor's booth or podium, etc. Public Static IP address is provided. | \$475 |
| Wireless Services | | |
| Amenity Hotspot | Temporary Courtesy Access service to allow complementary internet access for conferees at an event. Includes Help Desk for event attendees. | \$300 - 800* |
| Wireless Internet Access | Alternative for Ethernet. Per computer per day. | \$50 |
| Spectrum Coordination | Channel and Power assignment plus issue resolution This is mandatory if a Conference Sponsor or Exhibitor desires to bring in wireless network equipment. | \$200 |

* only one Amenity Hotspot service can be provided – first come first serve.
Price depends on the number of rooms served.

To order Wireless Services, please have customer contact AirRoamer Inc at 866-944-9525 ext 2, or via email to info@AirRoamer.com.

| Service | Description | Applications |
|--------------------------------|---|---|
| Ethernet | <p>Provides an Ethernet connection in a conference room.</p> <p>Ordered by exhibitor prior to the event.</p> <p>The service will be set up prior to the event starting, along with the booth, etc. Cable is run to the booth with enough extra cable that the exhibitor could then run the cable to their computer anywhere in the booth.</p> <p>Cables are taped for safety.</p> | <p>Demonstrations, for example, when coupled with an LCD projector. This can be a powerful tool in that a new system, application or process can be shown to your audience, as a live demonstration, rather than static pictures. This allows Q&A to be more effective, in that answers can be demonstrated rather than just verbally explained. It also allows you to respond more effectively to unanticipated questions.</p> <p>Administration, for registering attendees, or taking membership. Rather than creating information on paper and entering it later, information can be entered directly into your system saving effort and reducing errors. Customers can look at the info as entered and confirm its accuracy. A printer can be connected, allowing you to provide a receipt and confirmation form on the spot.</p> <p>Sales (web based) can be charged to a credit card, with real time authorization.</p> |
| Ethernet with Static IP | <p>Similar to the standard Ethernet service, but rather than being assigned a private dynamic IP address, you will have a public Static IP address. This means that computers elsewhere on the Internet will be able to establish (initiate) connections with your computer.</p> | <p>In addition to the applications mentioned for the Conference Room Ethernet service, a public Static IP address may be required for your application. Your IT or technical department will know this.</p> <p>Applications that often require a public Static IP include servers, high security applications, some VPN's, some e-commerce systems. Please check with your technical prime or IT department prior to ordering.</p> |

| Service | Description | Applications |
|---------------------------------|--|--|
| Amenity Hotspot | Provides a “hotspot” for your customers, or visitors. Users must have a working cell phone that can receive SMS messages for authentication purposes. The log in page is customized to have the name and logo of the business paying for the service. After successful login, the user is redirected to the home page of the business paying for the service. Includes Help Desk. Reasonable Bandwidth per user. | Increases traffic to your booth or conference by providing a valuable amenity to your customers. Login page can also have a brief message, such as “Please Visit us at booth 123.” Your customers can do almost anything including send and receive email, access web pages, initiate a VPN to their corporate network. |
| Wireless Internet Access | This is a password authenticated wireless service for any WiFi compatible notebook computer. It provides higher bandwidth per user than the Amenity Hotspot service. Additional passwords may be ordered if there is more than one computer. | Casual access for email, or web browsing. Access to the corporate network via VPN, etc. The initial password can only be used by one computer at a time, so if multiple computers require access at the same time, then additional passwords should be ordered. |
| Spectrum Coordination | Channel and Power assignment plus issue resolution allowing a Conference Sponsor or Exhibitor to bring in their own Wireless equipment. | |

Limitations

For Ethernet Service, and all Wireless Services, your computer is assigned a private dynamic IP address (in technical terms – you are behind a NAT firewall), this means that your computer can initiate connections with the Internet, but other computers on the internet cannot initiate connections with you. So, for example, if your application involved running a web server, it would not work with a private dynamic IP address. If you require a public Static IP address, we can provide it – please choose the Ethernet with Static IP service. If you are unsure if you require a Static IP address, please contact your technical department to confirm. Switching to a Static IP service at the last minute may not be possible.

Your computer is on a private network behind a firewall. While this is not complete protection, it provides a high degree of protection from 3rd parties accessing your computer without you having requested a connection first. We still recommend that computers are equipped with personal firewalls and virus protection.

Please note, for mission critical applications, we recommend that customers use Ethernet services, rather than WiFi service, as WiFi service may be interrupted due to wireless signal transmission factors beyond our control.
